

4.

A picture is **enlarged**.

Find the height of the building in the enlarged picture.

**Method 1:**

$$\frac{12}{\square} \times \square = \square$$

The height of the building in the enlarged picture is  $\square$  cm.

**Method 2:**

The length of the building in the original picture is  $\frac{4}{5}$  the length of the building in the enlarged picture.

$$\frac{20}{25} = \frac{4}{5}$$

$$\frac{12}{\square} = \frac{4}{5}$$

$$\frac{20}{25} = \frac{4}{5} = \frac{12}{\square}$$

The height of the building in the enlarged picture is  $\square$  cm.
