Robyn Silbey is available for training teachers, coaches, curriculum specialists, and administrators in the Singapore Math[®] program.

Silbey loves motivating teachers and students to value the power and elegance of the Singapore approach to math. She facilitated a five-year Singapore Math[®] program roll-out in Montgomery County, Maryland, during which time the school's state assessment math scores soared from the mid 50's to the low 90's. Through the United States Department of Education's Teacher Training Corps, Silbey shared her experiences with educators around the country. In addition, the elements of Silbey's highly successful program roll-out are featured as the Professional Development Case Study in Appendix C of the American Institute for Research document "What the United States Can Learn From Singapore's World-Class Mathematics System".

The Singapore Math[®] program will produce unparalleled success to your staff and students when paired with Silbey's instructional delivery techniques and strategic planning.
